

Ortho-to-para abundance ratios (OPRs) of NH₂ in comets: The meaning of OPRs of cometary volatiles

Yoshiharu Shinnaka (*NAOJ/JSPS Research Fellow*)

H. Kawakita¹, E. Jehini, A Decock², D. Hutsemékers², J. Manfroid²

¹Kyoto Sangyo University, Japan, ²University of Liege, Belgium

Comet :

- remnants of **icy planetesimals** formed in the solar nebula 4.6 Gyrs ago

Components:

- **icy** components : H₂O, CO, CO₂, NH₃, etc.
- **dust** components : Si, Mg, Fe, Na, etc.

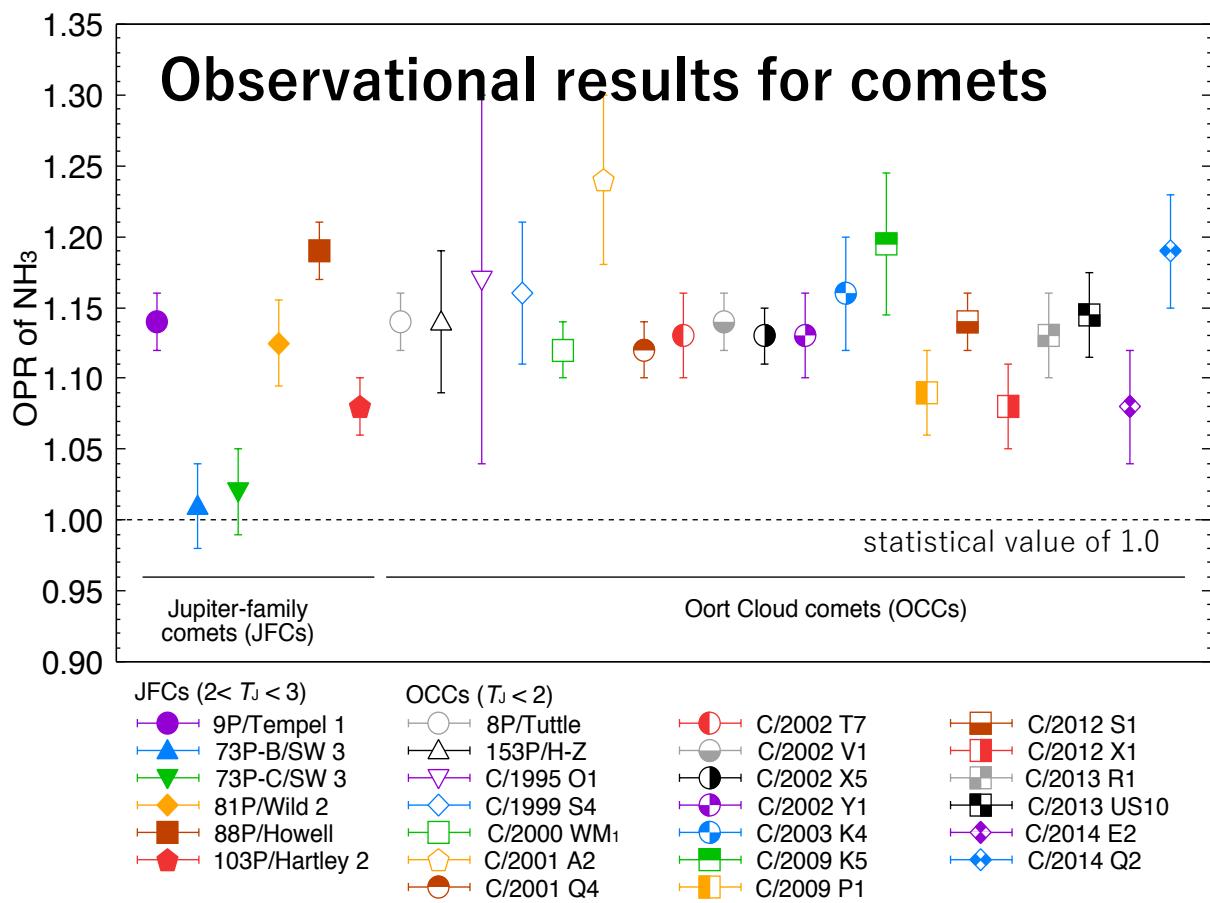

→ Cometary ices have kept **past information in the solar system**

Ortho-to-para abundance ratios (OPRs) of NH_2 in comets: The meaning of OPRs of cometary volatiles

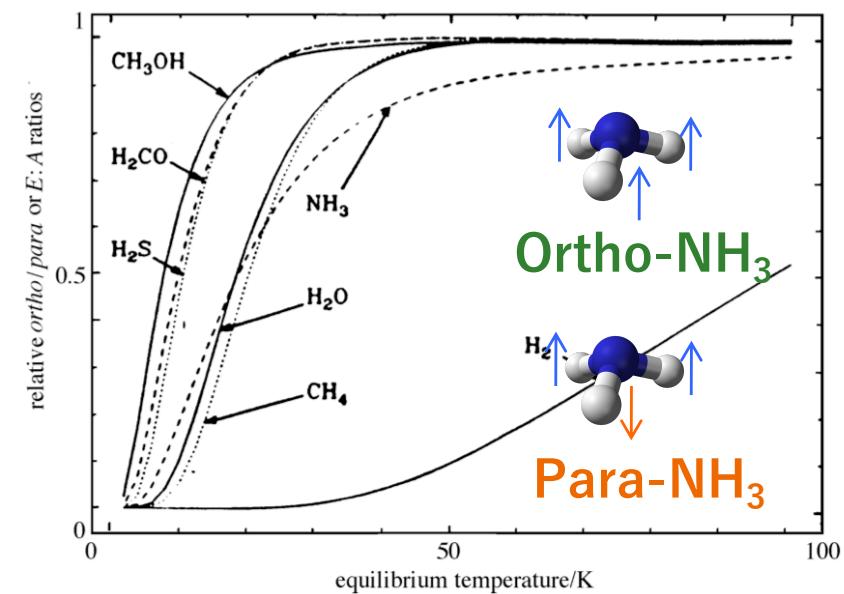

Yoshiharu Shinnaka (*NAOJ/JSPS Research Fellow*)

H. Kawakita¹, E. Jehin, A Decock², D. Hutsemékers², J. Manfroid²

¹Kyoto Sangyo University, Japan, ²University of Liege, Belgium

Shinnaka et al. 2016, MNRAS, 462, S124

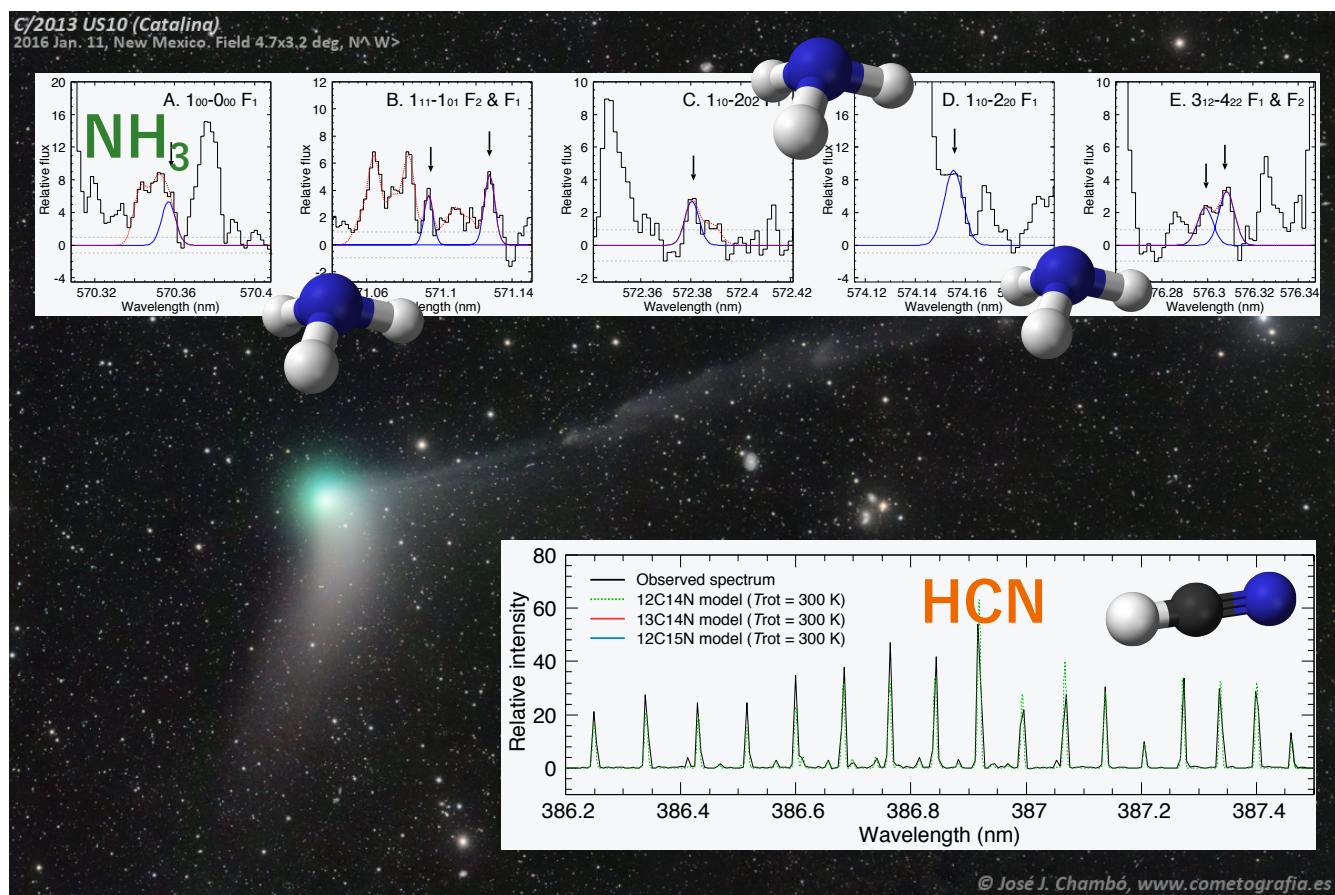

- **A nuclear spin temperature** is one of interpretations of OPR
- However, laboratory experiments demonstrated **fast ortho-para conversion** in **solid-phase water**

Nitrogen isotopic ratios of NH_2 and CN in comet C/2013 US10 (Catalina) by HDS/Subaru

Yoshiharu Shinnaka (*NAOJ/JSPS Research Fellow*)
