This report represents echelle spectral formats (echellograms) and response functions of Infrared Camera and Spectrograph (IRCS) from  $zJ-$  to  $M-$ bands. The response function of each setting in this report includes the transmittance of atmosphere, blaze functions of echelle and cross-disperser gratings, and transmittance of the filter.

- The infrared spectral lines shown on echellograms and response functions are as follows:

- (a) OH lines (Steed & Baker, 1979)
- (b) Ar lines (Rao, Humphreys, & Rank, 1966)
- (c) [Fe II] lines (Nussbaumer & Storey, 1988)
- (d) Atomic Hydrogen lines (Hummer & Storey, 1987)
- (e) Molecular Hydrogen lines (UKIRT Homepage)<sup>1</sup>
- (f) He I and He II lines (UKIRT Homepage)
- (g)  $^{12}\text{C}^{16}\text{O}$  and  $^{13}\text{C}^{16}\text{O}$  bandheads (UKIRT Homepage)
- (h)  $^{12}\text{C}^{16}\text{O}$  and  $^{13}\text{C}^{16}\text{O}$  fundamental (1-0) band lines  $4.50 - 5.00 \mu\text{m}$  (UKIRT Homepage)

Each line group is marked with different color as indicated at lower-left corner of each echellogram.

- Each value in ‘Intensity’ column of tables in this report indicates as follows:
  - (a) Intensities in kR for OH lines (Steed & Baker, 1979)
  - (b) Einstein coefficients for [Fe II] lines (Nussbaumer & Storey, 1988)
  - (c) Relative intensities of  $I(\text{line})/I(\text{H}\beta)$  for atomic Hydrogen lines(Hummer & Storey, 1987)
  - (d) Relative intensities of  $I(\text{line})/I(1-0\text{S}(1))$  at LTE ( $T=4000 \text{ K}$ ) for H<sub>2</sub> lines (UKIRT homepage)
- The accuracies of ‘X’ and ‘Y’ columns are about  $\pm 10 \text{ pixels}^2$

<sup>2</sup>The current version of echelle simulator calculates echellograms without correction of optical abbreviations. We will correct the optical abbreviations for the higher fitting accuracies in the next version.
