

# **SUBARU School 2014**

## **Account Setup**

Jae-Joon Lee

# Remote Login

Unless you have all the required programs installed in your laptop, you are advised to use the server we provide for the tutorial session.

- hostname : polaris.kasi.re.kr
- ssh port : 7774
- enable ForwardX11
- username : subaru\_tutor03
- passwd : XXXXXX

polaris.kasi.re.kr

username:subaru\_tutor03

passwd:kar10j0D

# Minimum Requirements

- ssh client
- X-window server (or equivalent)

# Linux / Mac OS X

open a terminal

```
> ssh -p 7774 -X -l subaru_tutor03 polaris.kasi.re.kr
```

Or any other fancy tools you are familiar with.

Make sure that

- port number = 7774
- forward X11 connection

# MS Windows

## Install

- ssh client
- X-window server (or equivalent)

## MobaXterm

<http://mobaxterm.mobatek.net/>

# Working directory

When you log in

```
> ls
```

```
scratch
```

Work under this directory which has lots of free disk space.

```
> cd scratch
```

```
> ls
```

```
subaru_sample_data
```

# Set up your environments

Whenever you log in, do

```
> subaru_setup
```

Or modify your `~/.bashrc` file accordingly.  
(bash is your default shell)

# Epilogue

- Everything you store in the server will be gone after the school.
- So, back up your data if you think you will need it!
